#### Introduction

The ProQual Level 2 NVQ Diploma in Insulation and Building Treatments (Construction) qualification provides a nationally recognised qualification for those working in this specialised area of construction.

The awarding body for this qualification is ProQual Awarding Body (<a href="www.proqualab.com">www.proqualab.com</a>) and the regulatory body is the Office of Qualifications and Examinations Regulation (Ofqual); it is also endorsed by the sector body for construction - CITB.

The qualification has been accredited onto the Regulated Qualifications Framework (RQF) and is published on Ofqual's Register of Qualifications.

# Qualification Profile Level 2 NVQ Diploma in Insulation and Building Treatments (Construction)

Qualification title ProQual Level 2 NVQ Diploma in Insulation and Building

**Treatments (Construction)** 

Ofqual qualification number 603/6900/0

Level 2

Total Qualification Time 480-680 hours (214-281 GLH)

Pass or fail

Assessment Internally assessed and verified by centre staff

External quality assurance by ProQual verifiers

Qualification start date 14/12/2020

Qualification end date

# **Entry Requirements**

There are no formal entry requirements for this qualification.

Centres should carry out an **initial assessment** of candidate skills and knowledge to identify any gaps and help plan the assessment.

# **Qualification Structure**

To achieve the qualification candidates must complete one of the pathways, candidates may also complete any of the Additional Units.

**Unit Endorsements** are indicated in the Pathway unit listings below, details of endorsements are also included after the learning outcomes/assessment criteria at the end of each relevant unit

Pathway 1 – Wood Preserving and Damp-proofing

Pathway 2 – Wall Tie Replacement

Pathway 3 – Cavity Wall Insulation

Pathway 4 – Solid Floor Insulation

Pathway 5 – Under Floor Insulation

Pathway 6 – Cold Roof Insulation

CITB references are provided in this document for information only.

# Pathway 1 – Wood Preserving and Damp-proofing

Mandatory U	CITB references for information only

### **Centre Requirements**

Centres must be approved to offer this qualification. If your centre is not approved please complete and submit form **ProQual Additional Qualification Approval Application**.

#### Staff

Staff delivering this qualification must be appropriately qualified and/or occupationally competent.

#### **Assessors/Internal Quality Assurance**

Assessors for each unit must have verifiable, current industry experience and a sufficient depth of relevant occupational expertise and knowledge, and must use a combination of assessment methods as defined in the Consolidated Assessment Strategy.

Assessors and internal quality assurance verifiers for competence-based units or qualifications will normally need to hold appropriate assessor or internal quality assurance qualifications.

# **Support for Candidates**

Materials produced by centres to support candidates should:

- enable them to track their achievements as they progress through the learning outcomes and assessment criteria;
- provide information on where ProQual's policies and procedures can be viewed;
- provide a means of enabling Internal and External Quality Assurance staff to authenticate evidence

# **Links to National Standards / NOS mapping**

National Occupational Standards (NOS) are owned by a Sector Skills Council or Standard Setting Body and they describe the skills, knowledge and understanding needed to undertake a particular task or job at different levels of competence.

The structure and units of this qualification are based on NOS for the construction sector developed by CITB.

#### **Assessment**

This qualification is competence-based, candidates must demonstrate the level of competence described in the units. Assessment is the process of measuring a candidate's skill, knowledge and understanding against the standards set in the qualification.

The qualifications must be assessed in a work environment and in accordance with the ConstructionSkills' Consolidated Assessment Strategy for Construction and the Built Environment, and it must be internally assessed by an appropriately experienced and qualified assessor.

Each candidate is required to produce a portfolio of evidence which demonstrates their achievement of all of the learning outcomes and assessment criteria for each unit.

Evidence can include:

- observation report by assessor
- assignments/projects/reports
- professional discussion
- witness testimony
- candidate product
- worksheets
- record of oral and written questioning
- Recognition of Prior Learning

**Learning outcomes** set out what a candidate is expected to know, understand or be able to do.

**Assessment criteria** specify the standard a candidate must meet to show the learning outcome has been achieved.

Learning outcomes and assessment criteria can be found from page 14.

**Additional information** for assessment and requirements for unit **endorsements** where relevant is included after all of the learning outcomes and assessment criteria for each unit.

# **Internal Quality Assurance**

An internal quality assurance verifier confirms that assessment decisions made in centres are made by competent and qualified assessors, that they are the result of sound and fair assessment practice and that they are recorded accurately and appropriately.

# **Adjustments to Assessment**

Adjustments to standard assessment arrangements are made on the individual needs of candidates. ProQual's Reasonable Adjustments Policy and Special Consideration Policy sets out the steps to follow when implementing reasonable adjustments and special considerations and the service that ProQual provides for some of these arrangements.

Centres should contact ProQual for further information or queries about the contents of the policy.

# **Results Enquiries and Appeals**

All enquiries relating to assessment or other decisions should be dealt with by centres, with reference to ProQual's Enquiries and Appeals Procedures.

#### Certification

Candidates who achieve the requirements for this qualification will be awarded:

- A certificate listing all units achieved, and
- A certificate giving the full qualification title -

ProQual Level 2 NVQ Diploma Insulation and Building Treatments (Construction)

#### **Claiming certificates**

Centres may claim certificates for candidates who have been registered with ProQual and who have successfully achieved the qualification. All certificates will be issued to the centre for successful candidates.

#### **Unit certificates**

If a candidate does not achieve all of the units required for a qualification, the centre may claim a unit certificate for the candidate which will list all of the units achieved.

#### Replacement certificates

If a replacement certificate is required a request must be made to ProQual in writing. Replacement certificates are labelled as such and are only provided when the claim has been authenticated. Refer to the Fee Schedule for details of charges for replacement certificates.

	2.3	Describe how to report risks and hazards identified by the following:	
		<ul> <li>risk assessment</li> </ul>	
		<ul> <li>personal assessment</li> </ul>	
		<ul> <li>methods of work</li> </ul>	
		• safe systems of work	
		<ul> <li>manufacturers' technical information</li> </ul>	
		• data sheets	
		<ul> <li>statutory regulations</li> </ul>	
		official guidance	
		Control of Substances Hazardous to Health (COSHH)	
	2.4	Explain the accident reporting procedures and who is responsible for making reports.	

Learning outcomes		ssment criteria
The learner will be able to:		earner can:
3 Select the required quantity and quality of resources for the methods of work in relation to building construction, defects and interfaces.	3.1	Select resources associated with own work.
	3.2	Check the suitability, compatibility and characteristics of the materials, components and finishes and determine if they are moisture open or moisture closed and their impact on the building.
interfaces.	3.3	Record and report issues or defects.
	3.4	Describe why the characteristics, compatibility, quality, uses, sustainability, limitations and defects associated with the resources are important and how defects should be rectified.
	3.5	Describe how the resources should be used and how problems associated with the resources are reported.
	3.6	Describe how to confirm that the resources and materials conform to the specification.
	3.7	Explain why the organisational procedures have been developed and how they are used for the selection of required resources.
	3.8	Describe how to identify the hazards associated with the resources and methods of work and how they are overcome.
4 Minimise the risk of damage to the work and surrounding area in relation to building	4.1	Protect the work and its surrounding area from damage in accordance with safe working practices and organisational procedures.
construction, defects and interfaces.	4.2	Maintain a safe, clear and tidy work area.
iliteriaces.	4.3	Explain why it is important to maintain a safe, clear and tidy work area.
	4.4	Dispose of waste in accordance with current legislation.
	4.5	Describe how to protect work and its surrounding area from damage by general workplace activities, other occupations and adverse weather conditions and how to minimise damage to existing building fabric.
	4.6	Explain the importance of protecting the work and its surrounding area against the risk of damage.

Learning outcomes	Assessment criteria		
The learner will be able to:	The learner can:		
5 Comply with the given contract information when identifying common building construction, defects and interfaces to the required specification.	5.1 Comply with the given contract information to carry out the work efficiently to the required specification.		
	5.2 Demonstrate work skills to carry out external and internal pre installation checks in regard to building construction, defects and material interfaces:		
the required spesification.	5.3 Identify common building defects including but not limited to:		
	salt contamination		
	<ul> <li>causes of dampness</li> </ul>		
	rain penetration		
	rising damp		
	internal moisture vapour		
	damaged services		
	structural defects		
	5.4 Describe how the methods of work to meet the		
	specification, are carried out and how problems are identified and reported by the application of knowledge for safe, healthy and environmental work practices, procedures and skills relating to the method and area of work relating to the following:		
	<ul> <li>the suitability, compatibility and characteristics of the materials, components and finishes, and determine if they are moisture open or moisture closed, their impact on the building and their appropriateness to the design and physical application</li> </ul>		
	<ul> <li>how to record and report issues or defects with the materials, components and finishes</li> <li>why it is important to carry out external and internal</li> </ul>		
	pre-installation checks		
	<ul> <li>how to carry out external and internal pre- installation checks, assessing, recording and reporting issues to include but not limited to:         <ul> <li>property suitability</li> <li>structural integrity</li> </ul> </li> </ul>		
	<ul><li>dampness</li><li>decay</li><li>exposure ratings</li></ul>		
	<ul><li>vents and ventilation</li><li>services (gas, electric, water, media cables)</li></ul>		
	why it is important to ensure that all necessary  repairs are completed prior to installation.		
	repairs are completed prior to installation  • the implications that types of construction and		
	materials have on the introduction of energy		
	efficiency measures and other forms of building treatments with specific reference to:		

- roofs
- walls including internal and external finishes
- floors
- windows and doors
- chimneys and fireplaces
- flues and combustion ventilation
- fabric interfaces
- existing services
- the importance of the correct sequencing of installation of energy efficiency measures and building treatments
- how performance varies in different construction types, locations and through the impact of habitation and usage
- how alterations, additions and extensions to the original construction can affect the performance of the building
- how to identify common building defects including but not limited to: salt contamination and causes of dampness, rain penetration, rising damp, internal moisture vapour, damaged services, structural defects and understand the implications of these when they are present
- how achieving continuity of the insulation and building treatments can prevent problems such as water ingress, poor energy efficiency and thermal bridges, whilst understanding the unique circumstances at party walls and the associated risks to adjacent properties
- how to recognise unintended consequences, why they happen, how to avoid them and the importance of moisture content in external fabric including but not limited to:
  - impacts on neighbouring properties
  - insulation fitting and placement for different insulation types
  - junctions
  - thermal bridging and condensation risks
  - thermal bypassing
  - void ventilation
- the potential causes of mould and fungal decay in buildings and the impact of ventilation and air flow following the installation of thermal efficiency measures
- the implications of building defects and the repairs required and how they will affect the choice of energy efficiency measures and building treatments
- the importance of compatibility and interactions between measures and the fabric of the underlying building
- how to identify when specialist skills and knowledge are required and report accordingly, including but not limited to:

- fire safety
- electrical
- gas
- asbestos
- Radon
- heritage
- ecology
- archaeological and architectural features
- ventilation
- dampness and building exposure
- the relevance of an assessment of significance and how to recognise specific requirements for structures of special interest, traditional construction, hard-to-treat buildings and historical significance
- how your actions can lead to unintended consequences, why they happen, how to avoid them and the importance of reporting them
- 5.5 Describe the needs of other occupations and the importance of team work and communication how to effectively communicate within a team when identifying building construction, defects and interfaces.

Additional information about this unit			
Assessment Guidance	This unit must be assessed in a work environment, in accordance with the ConstructionSkills' Consolidated Assessment Strategy for Construction and the Built Environment.		
	Assessors for this unit must have verifiable, current industry experience and a sufficient depth of relevant occupational expertise and knowledge, and must use a combination of assessment methods as defined in the Consolidated Assessment Strategy.		
	Workplace evidence of skills cannot be simulated.		
Sector Subject Areas	5.2 Building and Construction		
Availability for use	Shared unit		
Unit guided learning hours	90		
Assessment	10		

Title:	Preparing structures for treatment in the workplace		
Unit Number:	D/617/2789		
Learning outcomes  The learner will be able to:		Assessment criteria The learner can:	
Interpret the given information relating to the work and resources when preparing structures for treatment.		1.1	Interpret and extract relevant information from drawings, specifications, schedules, method statements, risk assessments, manufactures' information and data sheets.
		1.2	Comply with information and/or instructions derived from risk assessments and method statements.
		1.3	Describe the organisational procedures developed to report and rectify inappropriate information and unsuitable resources and how they are implemented.
		1.4	Describe different types of information, their source and how they are interpreted in relation to:  - drawings, specifications, schedules, method statements, risk assessments, manufactures' information and data sheets, and current regulations governing buildings.
2 Know how to describe relevant legislate official guidant preparing struct treatment.	ation and ce when	2.1	Describe their responsibilities regarding potential accidents, health hazards and the environment whilst working:  – in the workplace, below ground level, in confined spaces, at height, with tools and equipment, with materials and substances, with movement/storage of materials and by manual handling and mechanical lifting.
	2	2.2	Describe the organisational security procedures for tools, equipment and personal belongings in relation to site, workplace, vehicles, company and operative/technician.
		2.3	Explain what the accident reporting procedures are and who is responsible for making reports.

<ul> <li>safe use of access equipment and work platforms</li> </ul>
<ul> <li>safe use, storage and handling of materials, tools and</li> </ul>
equipment
<ul> <li>specific risks to health</li> </ul>

for treatment.

to the following

Use health and safety control equipment safely and

comply with the methods of work to carry out the

activity in accordance with current legislation and

organisational requirements when preparing structures

Demonstrate compliance with given information and relevant legislation when preparing structures for treatment in relation

3.1

3.2

Maintain safe and healthy

working practices when

preparing structures for

treatment.

Title: Preparing Struc		s for Treatment in the Workplace	
Learning outcomes The learner will be able to:		Assessment criteria The learner can:	
3 continued		Explain why and when health and safety control equipment identified by the principles of prevention should be used, relating to preparing structures for treatment, and the types, purpose and limitations of each type, the work situation and general work environment, in relation to:  - collective protective measures  - personal protective equipment (PPE)  - respiratory protective equipment  - local exhaust ventilation (LEV).	
		Describe how the relevant health and safety control equipment should be used in accordance with the given working instructions.	
		Describe how emergencies should be responded to in accordance with organisational authorisation and personal skills when involved with fires, spillages, injuries and other task-related activities	
4 Select the required q and quality of resour	ces for	Select resources associated with own work in relation to materials, components, fixings, tools and equipment.	
the methods of work prepare structures fo treatment.		Describe the characteristics, quality, uses, sustainability, limitations and defects associated with the resources in relation to:  - cleaning fluids, neutralisers, inhibitors, water repellents, stabilisers and wall ties  - signs, barriers, props, fixings  - hand tools, portable power tools and equipment.	
	4.3	Describe how the resources should be used correctly and how problems associated with the resources are reported.	
	4.4	Explain why the organisational procedures have been developed and how they are used for the selection of required resources.	
	4.5	Describe any potential hazards associated with the resources and methods of work.	
		Describe how to calculate quantity length, area, volume and wastage associated with the method/procedure to prepare structures for treatment.	

Title: Preparing Stru		ctures	for Treatment in the Workplace	
Learning outcomes The learner will be able to:			sment criteria arner can:	
5 Minimise the risk of damage to the work and surrounding area when		nd rea when	5.1	Protect the work and its surrounding area from damage in accordance with safe working practices and organisational procedures.
	preparing structures fo treatment.	tures for	5.2	Minimise damage and maintain a clean work space.
			5.3	Dispose of waste in accordance with current legislation.
			5.4	Describe how to protect work from damage and the purpose of protection in relation to general workplace activities, other occupations and adverse weather conditions.
		5.5	Explain why the disposal of waste should be carried out safely in accordance with environmental responsibilities, organisational procedures, manufacturers' information and data sheets, statutory regulations and official guidance.	
6	the allocated t	time when	6.1	Demonstrate completion of the work within the allocated time.
preparing st treatment.			6.2	Describe the purpose of the work programme and explain why deadlines should be kept in relation to:  - types of progress charts, timetables and estimated times  - organisational procedures for reporting circumstances which will affect the work programme.
7	contract inform prepare structu treatment to th	rmation to tures for the required	7.1	Demonstrate the following work skills when preparing structures for treatment:  - measuring, marking out, preparing, positioning and securing.
	specification.		7.2	Use and maintain hand tools, portable power tools and ancillary equipment.
			7.3	Prepare for treatments of wood preservation and/or damp-proofing and/or wall tie replacement, to given working instructions, relating to three of the following:  - clean substrates  - erect temporary barriers and signs  - removal of non-structural and/or structural components for access to treatment areas  - storage of items to be reinstated.

Title:	Preparing Structures for Treatment in the Workplace	
Learning outcomes The learner will be able to:		Assessment criteria The learner can:
		<ul> <li>7.4 Describe how to apply safe, healthy and environmental work practices, follow procedures, report problems and establish the authority needed to rectify them, to:  – understand the implications of existing guarantees and warranties</li> <li>– prepare site and clean structures to substrate for either in-situ wood preservation and/or damp-proofing and/or wall tie replacement remedial treatments above and below (wood preservation only) ground level</li> <li>– protect the site from all treatments (dust sheets, plastic sheets)</li> <li>– measure areas for treatment and volumes of treatment products: cleaning fluids, neutralisers, inhibitors, bocides, water repellents stabilisers and wall ties</li> <li>– erect temporary barriers and signs</li> <li>– remove non-structural and structural components for access to treatment areas</li> <li>– check for hidden utilities</li> <li>– provide temporary supports to the structure</li> <li>– store items to be reinstated after treatment</li> <li>– recognise when specialist skills and knowledge are required and report accordingly</li> <li>– recognise specific requirements for structures of special interest, traditional construction (pre 1919) and historical significance and report accordingly</li> <li>– use hand tools, portable power tools and equipment</li> <li>– work at height</li> <li>– use access equipment and work platforms.</li> </ul>
		7.5 Describe the needs of other occupations and how to effectively communicate within a team when preparing structures for treatment.
		7.6 Describe how to maintain the tools and equipment used when preparing structures for treatment.

2	2 Know how to comply with relevant legislation and official guidance when installing wall ties in existing structures.		2.1	Describe their responsibilities regarding potential accidents, health hazards and the environment whilst working:  – in the workplace, below ground level, in confined spaces, at height, with tools and equipment, with materials and substances, with movement/storage of materials and by manual handling and mechanical lifting.		
			2.2	Describe the organisational security procedures for tools, equipment and personal belongings in relation to site, workplace, vehicles, company and operative/technician.		
			2.3	Explain what the accident reporting procedures are and who is responsible for making reports.		
3	3 Maintain safe and healthy working practices when installing wall ties in existing structures.		3.1	Use health and safety control equipment and comply with the methods of work to carry out the activity in accordance with current legislation and organisational requirements when installing wall ties in existing structures.		
			3.2	Demonstrate compliance with given information and relevant legislation when installing wall ties in existing structures in relation to the following:  - safe use of access equipment and work platforms  - safe use, storage and handling of materials, tools and equipment  - specific risks to health		

Title:	Installing wall ties in existing structures in the workplace				
Learning outcomes  The learner will be able to:			Assessment criteria The learner can:		
3 continued		3.3	Explain why and when health and safety control equipment, identified by the principles of prevention, should be used, relating to installing wall ties in existing structures, and the types, purpose and limitations of each type, the work situation and general work environment, in relation to:  - collective protective measures  - personal protective equipment (PPE)  - respiratory protective equipment (RPE)  - local exhaust ventilation (LEV).		
			Describe how the relevant health and safety control equipment should be used in accordance with the given working instructions.		
		3.5	Describe how emergencies should be responded to in accordance with organisational authorisation and personal skills when involved with fires, spillages, injuries and other task-related activities.		
	uired quantity resources for	4.1	Select resources associated with own work in relation to materials, components, fixings, tools and equipment.		
	the methods of work to install wall ties in existing	4.2	Describe the characteristics, quality, uses, sustainability, limitations and defects associated with the resources in relation to:  – ties, fixings, fittings, resins and grouts  – hand tools, portable power tools and equipment.		
		4.3	Describe how the resources should be used correctly and how problems associated with the resources are reported.		
		4.4	Explain why the organisational procedures have been developed and how they are used for the selection of required resources.		
			Describe any potential hazards associated with the resources and methods of work.		
		4.6	Describe how to calculate quantity, length, area and wastage associated with the method/procedure to install wall ties in existing structures.		

Title: Installing wall t		ties in e	existing structures in the workplace	
	Learning outcomes The learner will be able to:			arner can:
5 Minimise the risk of damage to the work and surrounding area when		5.1	Protect the work and its surrounding area from damage in accordance with safe working practices and organisational procedures.	
	structures.	ties in existing	5.2	Minimise damage and maintain a clean work space.
			5.3	Dispose of waste in accordance with current legislation.
			5.4	Describe how to protect work from damage and the purpose of protection in relation to general workplace activities, other occupations and adverse weather conditions.
			5.5	Explain why the disposal of waste should be carried out safely in accordance with environmental responsibilities, organisational procedures, manufacturers' information and data sheets, statutory regulations and official guidance.
6	Complete the the allocated	time when	6.1	Demonstrate completion of the work within the allocated time.
	structures.	ties in existing	6.2	Describe the purpose of the work programme and explain why deadlines should be kept in relation to:  - types of progress charts, timetables and estimated times  - organisational procedures for reporting circumstances which will affect the work programme.

Title: Insta	Illing wall ties in	existing structures in the workplace
Learning outcomes The learner will be able to:		essment criteria learner can:
7 Comply with the given contract information to install wall ties in existing structures to the required		Demonstrate the following work skills when installing wall ties in existing structures:  – measuring, marking out, fitting, finishing, positioning and securing.
specification.	7.2	Use and maintain hand tools, portable power tools and ancillary equipment.
		Install and test new wall ties/fixings into existing structures to given working instructions, relating to two of the following systems:  - driven  - grouted  - resin  - mechanical.
	7.4	Describe how to apply safe, healthy and environmental work practices, follow procedures, report problems and establish the authority needed to rectify them, to:  - carry out pre and post installation checks  - install driven, grouted, resin and mechanical wall tie/fixing systems into existing stone, concrete, masonry, brick, block, timber and manufactured unit structures  - understand the implications of existing guarantees and warranties  - understand the implications of existing cavity wall insulation  - test pull wall ties  - remove existing defective wall ties  - isolate existing defective wall ties  - recognise when specialist skills and knowledge are required and report accordingly  - recognise specific requirements for structures of special interest, traditional construction (pre 1919) and historical significance  - use hand tools, portable power tools and equipment  - work at height  - use access equipment and work platforms.
	7.5	Describe the needs of other occupations and how to effectively communicate within a team when installing wall ties in existing structures.
	7.6	Describe how to maintain the tools and equipment used when installing wall ties in existing structures.

Title:	nstalling wall ties in existing structures in the workplace		
Additional inform	ation about this unit		
Assessment Guidance	This unit must be assessed in a work environment and in accordance with the ConstructionSkills 'Consolidated Assessment Strategy for Construction and the Built Environment.		
	Assessors for this unit must have verifiable, current industry experience and a sufficient depth of relevant occupational expertise and knowledge, and must use a combination of assessment methods as defined in the Consolidated Assessment Strategy.		
	Workplace evidence of skills cannot be simulated.		
	This unit must be assessed against the endorsements detailed within the relevant NVQ structure.		
	ProQual Level 2 NVQ Diploma in Insulation and Building Treatments (Construction):		
	<b>Two</b> of the following endorsements required:		
	Driven systems		
	Grouted systems		
	Resin systems		
	Mechanical systems

	<ul> <li>access equipment</li> </ul>		
	<ul> <li>material and waste storage</li> </ul>		
	<ul> <li>the general public</li> </ul>		
	2.3 Explain the accident reporting procedures and who is responsible for making reports.		
	2.4 Describe the types of fire extinguishers available when installing cavity wall insulation and describe how and when they are used in relation to:		
	• water		
	• CO <sub>2</sub>		
	• foam		
	<ul><li>powder</li></ul>		

Learning outcomes	Assessment criteria		
The learner will be able to:	The learner can:		
Comply with current,     relevant legislation,     standards and official	3.1 Demonstrate compliance with, relevant legislation, standards and official guidance when installing cavity wall insulation in relation to the following:		
guidance to carry out your work and maintain safe and	methods of work		
healthy work practices	safe use of health and safety control equipment		
	Safe use of access equipment and harness systems		
	<ul> <li>safe use, storage and handling of materials, tools and equipment</li> </ul>		
	operative maintenance of installation equipment		
	specific risks to health including mental health		
	<ul> <li>specific risks associated with ventilation (roof space, inside the property and under floor) and combustion appliances</li> </ul>		
	3.2 Explain why, when and how health and safety control equipment, identified by the principles of prevention, should be used when installing cavity wall insulation, in relation to:		
	collective protective measures		
	<ul> <li>personal protective equipment (PPE)</li> </ul>		
	<ul> <li>respiratory protective equipment (RPE)</li> </ul>		
	local exhaust ventilation (LEV)		
	3.3 Describe how emergencies should be responded to in accordance with organisational authorisation and personal skills in relation to:		
	• fires		
	<ul><li>spillages</li></ul>		
	• injuries		
	<ul> <li>emergencies relating to occupational activities</li> </ul>		
	<ul> <li>identification of and reporting asbestos containing materials</li> </ul>		
	3.4 Describe how to report risks and hazards identified by the following:		
	risk assessment		
	personal assessment		
	methods of work		
	manufacturers' technical information		
	data sheets		
	statutory regulations		
	official guidance     Garden Of Substances Harandown to Haralth (COSHN)		
	<ul> <li>Control Of Substances Hazardous to Health (COSHH)</li> </ul>		

Learning outcomes	Assessment criteria	
The learner will be able to:	The learner can:	
4 Select the required quantity and quality of resources for the methods of work to	4.1	Select resources associated with own work in relation to materials, components and finishes, tools and equipment.
install cavity wall insulation.	4.2	Check the suitability, compatibility characteristics of the materials, components and finishes determine if they are moisture open or moisture closed and their impact on the building.
	4.3	Record and report issues or defects.
	4.4	Describe why the characteristics, compatibility, quality, uses, sustainability, limitations and defects associated with the resources are important and how defects should be rectified.
	4.5	Describe how the resources should be used and how problems associated with the resources are reported in relation to:
		protective sheeting
		warning signs
		public protection equipment
		calibration equipment
		essential airway sleeves
		cavity barriers
		• mortar mix
		• mortar dyes
		• insulation
		• combustion vents
		all work tools
	4.6	Describe how to confirm that the resources and materials conform to the specification.
	4.7	Explain why the organisational procedures have been developed and how they are used for the selection of required resources.
	4.8	Describe how to identify the hazards associated with the resources and methods of work and how they are overcome.
	4.9	Describe how to calculate the quantity of materials required and used to ensure, adequacy of full as per system designer specification and wastage associated with the method and procedure to install cavity wall insulation.

Lea	Learning outcomes		sment criteria		
The	The learner will be able to:		The learner can:		
5	Minimise the risk of damage to the work and surrounding area when installing cavity	5.1	Protect the work and its surrounding area from damage in accordance with safe working practices and organisational procedures.		
	wall insulation.	5.2	Maintain a safe, clear and tidy work area.		
		5.3	Explain why it is important to maintain a safe, clear and tidy work area		
		5.4	Dispose of waste in accordance with current legislation.		
		5.5	Describe how to protect work and its surrounding area from damage by general workplace activities, other occupations and adverse weather conditions and how to minimise damage to existing building fabric.		
		5.6	Explain the importance of protecting the work and its surrounding area against the risk of damage.		
		5.7	Explain why and how the disposal of waste must be carried out safely in accordance with the following:		
			current legislation		
			<ul> <li>environmental responsibilities</li> </ul>		
			<ul> <li>organisational procedures</li> </ul>		
			<ul> <li>suppliers and manufactures' information</li> </ul>		
			• data sheets		
			statutory regulations		
			official guidance		
6	Complete the work within the allocated time when installing cavity wall insulation.	6.1	Demonstrate completion of your work within the estimated, allocated time and performance requirements of the system design, method statement and the required standard.		
		6.2	Describe the purpose of the work programme, including the estimated and allocated time and explain why deadlines should be kept in relation to:		
			• types of progress charts, timetables and estimated times		
			<ul> <li>organisational procedures for reporting circumstances which will affect the work programme.</li> </ul>		

Learning outcomes	Assessi	nent criteria
The learner will be able to:	The learner can:	
7 Comply with the given contract information to carry	7.1	Demonstrate the following work skills when installing cavity wall insulation:
out the work efficiently install cavity wall insulation to the		measuring
required specification.		marking out
		• calibrating
		monitoring
		• fitting
		• filling
		making good
	7.2	Use and maintain all work tools and installation equipment.
	7.3	Carry out external and internal pre-installation check, assessing recording and reporting issues to include:
		suitable access
		property suitability
		structural integrity
		• dampness
		• decay
		exposure ratings
		vents and ventilation
		services (gas, electric, water, media cables)
	7.4	Check, record and report issues with construction ventilation, flues, chimneys and combustion air ventilators pre and post installation.
	7.5	Prepare for and install cavity wall insulation to given, system designer specification, method statement and the required standard.
	7.6	Drill holes to specified patterns using depth gauges and right angled drilling only, selecting the correct masonry drill bit, speed and setting, and taking effective steps to minimise the impact to the building fabric and preventing rubble falling into the cavity.
	7.7	Fit cavity barriers.
	7.8	Assemble and operate installation equipment, measuring density, flow and quality tests.
	7.9	Fill holes with matching and suitable materials.
	7.10	Clean, disassemble and prepare installation processing equipment for transportation.
	7.11	Handover and sign off to the customers satisfaction.
	7.12	Carry out post installation checks.

#### 7 Continued

- 7.13 Describe how the methods of work to meet the specification, are carried out and how problems are identified and reported by the application of knowledge for safe, healthy and environmental work practices, procedures and skills relating to the method and area of work relating to the following:
  - the suitability, compatibility and characteristics of the materials, components and finishes, and determine if they are moisture open or moisture closed, their impact on the building and their appropriateness to the design and physical application
  - how to record and report issues or defects with the materials, components and finishes
  - why it is important to carry out external and internal preinstallation checks
  - how to carry out external and internal pre-installation checks, assessing, recording and reporting issues to include:
    - suitable access
    - property suitability
    - structural integrity
    - dampness
    - decay
    - exposure ratings
    - vents and ventilation
    - services (gas, electric, water, media cables)

why it is important to ensure that all necessary repairs are completed prior to installation

- how to recognise, record and report the key issues that may inhibit commencement of the work including but not limited to:
  - condition of building fabric
  - identification of any areas of potential water penetration
  - visibility and completeness of damp proof course
  - condition of window and door seals
  - height of internal floors in relation to external floor height
  - condition of roof
  - damaged or spalled brickwork
  - drainage and down pipes
  - protection and existence of sub floor ventilation
  - cavity width and identification of any debris

#### 7 Continued

- how to identify when specialist skills and knowledge are required and report accordingly including but not limited to:
  - fire safety
  - electrical
  - asbestos
  - Radon
  - heritage
  - architectural features
  - ecology
  - ventilation
- the relevance of an assessment of significance and how to recognise specific requirements for structures of special interest, traditional construction, hard-to-treat buildings and historical significance
- how to identify, record, report and rectify unintended consequences not addressed in the design, including but not limited to the existence of: thermal bridges, thermal bypassing and water ingress, inadequate ventilation and condensation risk
- why it is important to avoid unintended consequences
- why it is important to explain installation procedure to building occupants to include but not limited to the following:
  - scope and work programme
  - safety requirements during the installation process
  - protection of property and personal items
  - specific benefits and implications to include homeowner information
  - agreed standards of making good
- the implications of existing guarantees and warranties that may be compromised by the installation, to include but not limited to:
  - wall ties
  - windows
  - damp proof course
  - renders
  - Tyrolean coatings
  - silicone weather proof coatings
- how to work with, around and in close proximity to plant and machinery

#### 7 Continued

- how to direct and guide the operations and movement of plant and machinery to ensure protection of a safe working environment
- how to identify and follow the installation quality requirements
- how and why it is important to check, record and report issues with construction ventilation, flues, chimneys and combustion air ventilators pre and post installation
- why it is important to ensure pre-installation material checks are within specified parameters, to include checking and recording batch number and reporting defects
- how to assemble and operate installation processing equipment in line with manufacturers and system manuals
- how to calibrate equipment to measure density, flow and quality tests to ensure they are in line with manufacturers specifications and material requirements
- why effective selection of PPE equipment to avoid cementation dust is important
- how to drill holes to specified patterns and the importance of using depth gauges and right angled drilling only, selecting the correct masonry drill bit, speed and setting, and taking effective steps to minimise the impact to the building fabric and preventing rubble falling into the cavity
- how to fit cavity barriers in accordance with specification from roof to ground level in order to avoid overspill and underspill between the two separated cavity elements
- how to install cavity wall insulation from inside and outside of a building including lance techniques
- why it is important to ensure effective and safe operation of equipment and consistency of fill using the appropriate technique for the selected material (to include bead using adhesive bonding agents and blown mineral wool)
- how to fill holes with matching and suitable materials to ensure evidence of the drill pattern is minimised and the finish is in keeping with the original building texture and colour
- why it is important to clean and disassemble installation processing equipment and pack away for transportation
- the different types of air and vapour control layers and breather membranes, where and how they should be used and why it is important to install them correctly
- the importance of ensuring the integrity of air and vapour control layers and breather membranes following installation and the need to maintain continuity
- why it is important to immediately record and report unforeseen events including but not limited to equipment

7 Continued	malfunctions, situations and faults not identified in the original design
	<ul> <li>why it is important to complete post installation checks in accordance with the system designer installations operations manual and report issues to include but not limited to safeguarding the combustion ventilation and report defects</li> </ul>
	<ul> <li>why it is important to provide post installation advice and guidance to building occupants including homeowner packs</li> </ul>
	• how to handover and sign off to the customers satisfaction
	<ul> <li>how to use all work tools and installation equipment in line with manufacturers and system specifications</li> </ul>
	<ul> <li>how to work at height using access equipment and harness systems</li> </ul>
	<ul> <li>how and why maintenance of all work tools and installation equipment is carried out</li> </ul>
7.14	Describe the needs of other occupations and the importance of team work and communication when installing cavity wall insulation.

Additional information about this unit		
Assessment Guidance	This unit must be assessed in a work environment, in accordance with the ConstructionSkills' Consolidated Assessment Strategy for Construction and the Built Environment.	
	Assessors for this unit must have verifiable, current industry experience and a sufficient depth of relevant occupational expertise and knowledge, and must use a combination of assessment methods as defined in the Consolidated Assessment Strategy.

Learning outcomes	Asses	ssment criteria		
The learner will be able to:	The le	The learner can:		
4 Select the required quantity and quality of resources for	4.1	Select resources associated with own work in relation to materials, components, tools and equipment.		
the methods of work to install insulation to solid floors.	4.2	Check the suitability, compatibility and characteristics of the materials and components, determine if they are moisture open or moisture closed and their impact on the building.		
	4.3	Record and report issues or defects.		
	4.4	Describe why the characteristics, compatibility, quality, uses, sustainability, limitations and defects associated with the resources are important and how defects should be rectified.		
	4.5	Describe how the resources should be used and how problems associated with the resources are reported in relation to:		
		<ul> <li>protective sheeting</li> </ul>		
		<ul> <li>warning signs</li> </ul>		
		<ul> <li>temporary barriers</li> </ul>		
		<ul> <li>insulation</li> </ul>		
		<ul> <li>making good materials</li> </ul>		
		<ul> <li>filling materials</li> </ul>		
		<ul> <li>tapes and sealants</li> </ul>		
		<ul> <li>all work tools</li> </ul>		
	4.6	Describe how to confirm that the resources and materials conform to the specification.		
	4.7	Explain why the organisational procedures have been developed and how they are used for the selection of required resources.		
	4.8	Describe how to identify the hazards associated with the resources and methods of work and how they are overcome.		
	4.9	Describe how to calculate the quantity of materials required to ensure consistency of coverage to manufacturers' specification and wastage associated with the method and procedure to install insulation to solid floors.		

Learning outcomes		Assessment criteria		
The	The learner will be able to:		The learner can:	
5	to the work and surrounding area when	5.1	Protect the work and its surrounding area from damage in accordance with safe working practices and organisational procedures.	
	installing insulation to solid floors.	5.2	Maintain a safe, clear and tidy work area.	
	110013.	5.3	Explain why it is important to maintain a safe, clear and tidy work area.	
		5.4	Dispose of waste in accordance with current legislation.	
		5.5	Describe how to protect work and its surrounding area from damage by general workplace activities, other occupations and adverse weather conditions and how to minimise damage to existing building fabric.	
		5.6	Explain the importance of protecting the work and its surrounding area against the risk of damage.	
		5.7	Explain why and how the disposal of waste must be carried out safely in accordance with the following:	
			current legislation	
			<ul> <li>environmental responsibilities</li> </ul>	
			<ul> <li>organisational procedures</li> </ul>	
			manufacturers' information	
			• data sheets	
			statutory regulations	
			official guidance	
6	Complete the work within the allocated time when installing insulation to solid floors.	6.1	Demonstrate completion of your work within the estimated, allocated time and performance requirements of the system design, method statement and the required standard.	
		6.2	Describe the purpose of the work programme, including the estimated and allocated time and explain why deadlines should be kept in relation to:	
			<ul> <li>types of progress charts, timetables and estimated times</li> </ul>	
			<ul> <li>organisational procedures for reporting circumstances which will affect the work programme</li> </ul>	

Learning outcomes	Assess	ment criteria
The learner will be able to:	The learner can:	
7 Comply with the given contract information to carry out the work efficiently to install	7.1	Demonstrate the following work skills when installing insulation to solid floors:
		<ul> <li>carrying out internal pre-installation checks</li> </ul>
insulation to solid floors to		• measuring
the required specification.		• marking out
		• calculating
		• cutting
		• fitting
		• filling
		<ul> <li>positioning and securing</li> </ul>
		• making good
	7.2	Use and maintain all work tools and equipment.
	7.3	Check, record and report issues with construction ventilation, flues, chimneys and combustion air ventilators pre and post installation.
	7.4	Recognise, record and report the key issues that may inhibit commencement of the work including but not limited to:
		condition of building fabric
		<ul> <li>identification of any areas of potential water penetration</li> </ul>
		<ul> <li>visibility and completeness of damp proof course and membranes</li> </ul>
		<ul> <li>condition of window and door seals</li> </ul>
		<ul> <li>height of internal floors in relation to external floor height</li> </ul>
		drainage and down pipes
		• protection of existing ventilation in line with design
	7.5	Identify the potential risk of increased condensation following installation relating to solid floors and how to prevent it.
	7.6	Prepare floor for insulation to include the following but not limited to:
		• safe systems of work
		minimising damage
		• checking existing services
		building construction and heritage significance
		<ul> <li>working surface, solid, free from defect, level and dry</li> </ul>

 customer safety 7.7 Check for hidden utilities. 7.8 Maintain integrity of membranes. 7.9 Remove and minimise damage to floorcoverings. Clear and safeguard existing and install additional 7.10 ventilation if required in accordance with the design and installation checks and report back issues which impact the ventilation assessment. 7.11 Protect the building occupants and their property. 7.12 Confirm pre-installation material checks are within specified parameters to include checking and reporting defects. 7.13 Rectify defects in preparation of insulation measures 7.14 Prepare and place insulation to solid floors using the following methods to given working instructions: • insulation under a screed insulation on top of a solid floor cut, place and tape insulation to manufacturers' specification • apply damp proof membrane as required restrict or reduce unwanted heat loss ensure maintenance of adequate ventilation • minimise the effects of thermal bridging through compliance with design detail and ensuring a consistent level of insulation of the installed area 7.15 Complete post installation checks in accordance with the design, method statement and installations operations manual and report issues to include but not limited to safeguarding the combustion ventilation and report defects. 7.16 Provide post installation advice and guidance to building occupants including homeowner packs. 7.17 Handover and sign off to the customers satisfaction. 7.18 Describe how the methods of work to meet the specification, are carried out and how problems are identified and reported by the application of knowledge for safe, healthy and environmental work practices, procedures and skills relating to the method and area of work relating to the following: • the suitability, compatibility and characteristics of the materials, components and finishes, and determine if they are moisture open or moisture closed, their impact on the building and their appropriateness to the design and physical application

- how to record and report issues or defects with the materials, components and finishes
- why it is important to carry out external and internal pre-installation checks
- how to carry out external and internal preinstallation checks assessing, recording and reporting issues to include:
  - suitable access
  - property suitability
  - structural integrity
  - dampness
  - decay
  - vents and ventilation
  - services (gas, electric, water, media cables)
- why it is important to ensure that all necessary repairs are completed prior to installation
- how to recognise, record and report the key issues that may inhibit commencement of the work including but not limited to:
  - condition of building fabric
  - identification of any areas of potential damp
  - evidence of incompleteness of damp proof course and membranes
  - height of internal floors in relation to external floor height
  - damaged or spalled brickwork
  - drainage and down pipes
  - protection and existence of sub floor ventilation
- how to identify when specialist skills and knowledge are required and report accordingly including but not limited to:
  - fire safety
  - electrical
  - asbestos
  - Radon
  - heritage
  - ecology
  - architectural features
  - ventilation
- the relevance of an assessment of significance and how to recognise specific requirements for structures of special interest, traditional construction, hard-to-treat buildings and historical significance
- how to identify, record, report and rectify unintended consequences not addressed in the design, including but not limited to the existence of: thermal bridges, thermal bypassing and water ingress, inadequate ventilation and condensation risk

- why it is important to avoid unintended consequences
- how to check, record and report issues with construction ventilation, flues, chimneys and combustion air ventilators pre and post installation
- why it is important to recognise the potential risk of increased condensation following installation relating to solid floors and how to prevent it
- why it is important to explain installation procedure to building occupants to include but not limited to the following:
  - scope and work programme
  - safety requirements during the installation process
  - protection of property and personal items
  - specific benefits and implications to include homeowner information
  - agreed standards of making good
- how to identify and follow the installation quality requirements
- how to work with, around and in close proximity to plant and machinery
- how to direct and guide the operations and movement of plant and machinery to ensure protection of a safe working environment
- how to prepare floor for insulation to include the following but not limited to:
  - safe systems of work
  - minimising damage
  - checking existing services
  - building construction and heritage significance
  - working surface, solid, free from defect, level and dry
  - customer safety
- how to check for and protect hidden utilities
- the importance of ensuring all work to services (gas, electric, water) is carried out by suitably qualified people
- how to maintain integrity of membranes
- how to remove and minimise damage to floorcoverings
- how to clear and safeguard existing and install additional ventilation if required in accordance with the design and installation checks and report back issues which impact the ventilation assessment
- how to protect the building occupants and their property
- how to confirm pre-installation material checks are within specified parameters to include checking and reporting defects
- how to rectify defects in preparation of insulation measures

- how to prepare and place insulation to solid floors using the following methods to given working instructions:
  - insulation under a screed
  - insulation on top of a solid floor
  - cut, place and tape insulation to manufacturers' specification
  - apply damp proof membrane
  - restrict or reduce unwanted heat loss
  - ensure maintenance of adequate ventilation
- why it is important to minimise the effects of thermal bridging through compliance with design detail and ensuring a full consistent level of insulation to the area being insulated
- the different types of air and vapour control layers and breather membranes, where and how they should be used and why it is important to install them correctly
- the importance of ensuring the integrity of air and vapour control layers and breather membranes following installation and the need to maintain continuity
- why it is important to immediately record and report unforeseen events including but not limited to equipment malfunctions, situations and faults not identified in the original design
- why it is important to complete post installation checks in accordance with the design, method statement and installations operations manual and report issues to include but not limited to safeguarding the combustion ventilation and report
- why it is important to provide post installation advice and guidance to building occupants including homeowner packs
- how to handover and sign off to the customers satisfaction
- how to use all work tools and equipment
- how to work at height using access equipment
- how and why maintenance of all work tools and installation equipment is carried out
- 7.19 Describe the needs of other occupations and the importance of team work and communication when installing insulation to solid floors.

Additional information about this unit				
Assessment Guidance	This unit must be assessed in a work environment, in accordance with the ConstructionSkills' Consolidated Assessment Strategy for Construction and the Built Environment.			
	Assessors for this unit must have verifiable, current industry experience and a sufficient depth of relevant occupational expertise and knowledge, and must use a combination of assessment methods as defined in the Consolidated Assessment Strategy.			
	Workplace evidence of skills cannot be simulated.			
Sector Subject Areas	5.2 Building and Construction			
Availability for use	Shared unit			
Unit guided learning hours	100			
Assessment	10			

Title:	Installing insulation to suspended floors in the workplace
Unit Number:	F/618/5681

Unit Number:	F/618/5681			
Learning outcomes		Assessment criteria		
The learner will be a  1 Interpret the ginformation rework and reso confirm its according to the second sec	given design elating to the urces to curacy, and relevance type, fabric when ation to	Assessment criteria The learner can:  1.1 Interpret and extract relevant information from:		
		accuracy, completeness and how they are interpreted in relation to:      drawings     specifications     schedules     method statements     risk assessments     design		
		<ul> <li>data sheets</li> <li>official guidance</li> <li>current legislation and regulations governing buildings</li> </ul>		

Learning outcomes	Assessment criteria		
The learner will be able to:	The learner can:		
2 Know how to comply with environmentally responsible work practices to meet current, legislation standards and official guidance when installing insulation to suspended floors.	<ul> <li>2.1 Describe their responsibilities regarding potential accidents, health hazards and the environment in relation to: <ul> <li>the workplace</li> <li>below ground level</li> <li>confined spaces</li> <li>at height</li> <li>tools and equipment</li> <li>materials and substances</li> <li>movement and storage of materials by manual handling and mechanical lifting</li> </ul> </li> </ul>		
	<ul> <li>2.2 Describe the organisational security procedures for tools, equipment and personal belongings in relation to: <ul> <li>site</li> <li>workplace</li> <li>siting and location of vehicles</li> <li>company</li> <li>customer</li> <li>access equipment</li> <li>materials and waste storage</li> <li>the general public</li> </ul> </li> </ul>		
	<ul> <li>2.3 Explain the accident reporting procedures and who is responsible for making reports.</li> <li>2.4 Describe the types of fire extinguishers available when applying surface finishes to installing insulation to suspended floors and describe how and when they are used in relation to: <ul> <li>water</li> <li>CO<sub>2</sub></li> <li>foam</li> <li>powder</li> </ul> </li> </ul>		

Learning outcomes	Assessment criteria		
The learner will be able to:	The learner can:		
3 Comply with current, relevant legislation, standards and official guidance to carry out your work and maintain safe and	3.1 Demonstrate compliance with, relevant legislation, standards and official guidance when installing insulation to suspended floors in relation to the following:		
healthy work practices	methods of work		
ricularly work practices	safe use of health and safety control equipment		
	safe use of access equipment		
	<ul> <li>safe use, storage and handling of materials, tools and equipment</li> </ul>		
	specific risks to health including mental health		
	<ul> <li>specific risks associated with ventilation (inside the property and under floor) and also including combustion appliances</li> </ul>		
	<ul> <li>specific risks associated with working in confined spaces</li> </ul>		
	3.2 Explain why, when and how health and safety control equipment, identified by the principles of prevention, should be used when installing insulation to suspended floors, in relation to:		
	collective protective measures		
	personal protective equipment (PPE)		
	respiratory protective equipment (RPE)		
	local exhaust ventilation (LEV)		
	3.3 Describe how emergencies should be responded to in accordance with organisational authorisation and personal skills in relation to:		
	• fires		
	• spillages		
	• injuries		
	emergencies relating to occupational activities		
	<ul> <li>identification of and reporting of asbestos containing materials</li> </ul>		
	3.4 Describe how to report risks and hazards identified by the following:		
	risk assessment		
	personal assessment		
	methods of work		
	manufacturers' technical information		
	data sheets		
	statutory regulations		
	official guidance     Gardan of Substances Hassadova to Haslah (COSHII)		
	Control of Substances Hazardous to Health (COSHH)		

Learning outcomes	Assessment criteria
The learner will be able to:	The learner can:
4 Select the required quantity and quality of resources for the	4.1 Select resources associated with own work in relation to materials, components, fixings, finishes, tools and equipment.
methods of work to install insulation to suspended floors.	4.2 Check the suitability, compatibility and characteristics of the materials, components and finishes, determine if they are moisture open or moisture closed and their impact on the building.
	4.3 Record and report issues.
	4.4 Describe why the characteristics, compatibility, quality, uses, sustainability, limitations and defects associated with the resources are important and how defects should be rectified.
	4.5 Describe how the resources should be used and how problems associated with the resources are reported in relation to:
	<ul> <li>protective sheeting</li> <li>warning signs</li> </ul>
	<ul><li>temporary barriers</li><li>making good materials</li><li>filling materials</li></ul>
	<ul> <li>sealants</li> <li>all work tools and equipment</li> </ul>
	4.6 Describe how to confirm that the resources and materials conform to the specification.
	4.7 Explain why the organisational procedures have been developed and how they are used for the selection of required resources.
	4.8 Describe how to identify the hazards associated with the resources and methods of work and how they are overcome.
	4.9 Describe how to calculate the quantity of materials required and used to ensure, adequacy of fill as per system designer specification and wastage associated with the method and procedure to install insulation to suspended floors.
5 Minimise the risk of damage to the work and surrounding area when installing insulation to	5.1 Protect the work and its surrounding area from damage in accordance with safe working practices and organisational procedures.
suspended floors.	5.2 Maintain a safe, clear and tidy work area.
	5.3 Explain why it is important to maintain a safe, clear and tidy work area
	5.4 Dispose of waste in accordance with current legislation.
	5.5 Describe how to protect work and its surrounding area from damage by general workplace activities, other occupations and adverse weather conditions and how to minimise damage to existing building fabric.
	<ul><li>5.6 Explain why and how the disposal of waste must be carried out safely in accordance with the following:</li><li>current legislation</li></ul>
	<ul><li>environmental responsibilities</li><li>organisational procedures</li></ul>

Learning outcomes		Assessment criteria		
The learner will be able to:		The learner can:		
		<ul> <li>suppliers and manufactures' information</li> <li>data sheets</li> <li>statutory regulations</li> <li>official guidance</li> </ul>		
6	Complete the work within the allocated time when installing insulation to suspended floors.	6.1 Demonstrate completion of your work within the estimated, allocated time and performance requirements of the system design, method statement and the required standard.		
		6.2 Describe the purpose of the work programme, including the estimated and allocated time and explain why deadlines should be kept in relation to:		
		<ul> <li>types of progress charts, timetables and estimated times</li> <li>organisational procedures for reporting circumstances which will affect the work programme</li> </ul>		

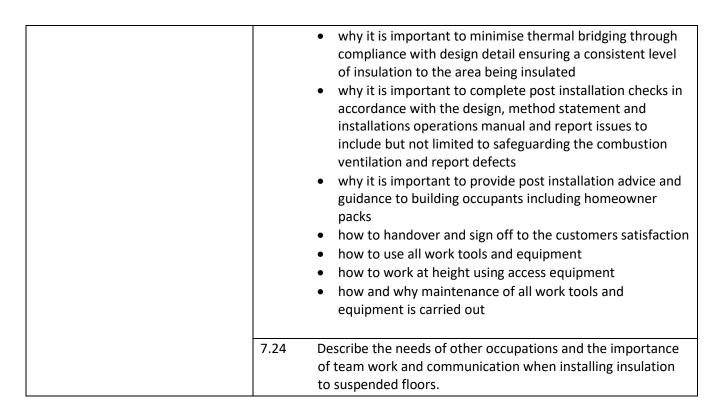

Learning outcomes	Assessment criteria
The learner will be able to:	The learner can:
7 Comply with the given contract information to carry out the	7.1 Demonstrate the following work skills when installing insulation to suspended floors:
work efficiently to install	<ul> <li>measuring</li> </ul>
insulation to suspended floors	marking out
to the required specification.	• cutting
	• fitting
	-
	• positioning
	<ul><li>securing</li><li>making good</li></ul>
	7.2 Use and maintain all work tools and equipment.
	7.3 Carry out external and internal pre-installation check,
	assessing, recording and reporting issues to include:
	suitable access
	<ul> <li>property suitability</li> </ul>
	structural integrity
	<ul><li>dampness</li></ul>
	• decay
	<ul> <li>vents and ventilation</li> </ul>
	<ul> <li>services (gas, electric, water, media cables)</li> </ul>
	7.4 Recognise, record and report the key issues that may inhibit commencement of the work including but not limited to:
	<ul> <li>condition of building fabric</li> </ul>
	<ul> <li>identification of any areas of potential water penetration</li> </ul>
	<ul> <li>visibility and completeness of damp proof course</li> </ul>
	<ul> <li>condition of window and door seals</li> </ul>
	<ul> <li>height of internal floors in relation to finished ground leve</li> </ul>
	<ul> <li>drainage and down pipes</li> </ul>
	<ul> <li>protection and existence of sub floor ventilation</li> </ul>
	7.5 Identify the potential risk of increased condensation following installation relating to suspended floors and how to prevent it
	7.6 Check, record and report issues with under floor (cross flow) ventilation, flues, chimneys and combustion air ventilators pre and post installation.
	7.7 Prepare floor for insulation creating access points taking into consideration the following but not limited to:
	<ul> <li>safe systems of work</li> </ul>
	<ul> <li>minimising damage</li> </ul>
	<ul> <li>checking existing services</li> </ul>
	<ul> <li>building construction and heritage significance</li> </ul>
	<ul><li>customer safety</li></ul>
	7.8 Install placed, mechanically or adhesively fixed insulation to suspended floors.
	7.9 Check for hidden utilities.

7.11	Remove and minimise damage to floorcoverings.
7.12	Ensure the minimum void area air space is maintained by removing debris.
7.13	Clear and safeguard existing and install additional in accordance with the design and installation checks and report back issues which impact the ventilation assessment.
7.14	Protect the building occupants and their property.
7.15	Confirm pre-installation material checks are within specified parameters to include checking and reporting defects.
7.16	Rectify defects in preparation of insulation measures.
7.17	Maintain existing sound-proofing.
7.18	Install and maintain fire resistant barriers.
7.19	Carry out post installation checks in accordance with the design, method statement and installations operations manual and report issues to include but not limited to safeguarding the combustion ventilation and report defects.
7.20	Provide post installation advice and guidance to building occupants including homeowner packs.
7.21	Handover and sign off to the customers satisfaction.
7.22	Work at height using access equipment.
	are carried out and how problems are identified and reported by the application of knowledge for safe, healthy and environmental work practices, procedures and skills relating to the method and area of work relating to the following:
	<ul> <li>the suitability, compatibility and characteristics of the materials, components and finishes, and determine if they are moisture open or moisture closed, their impact on the building and their appropriateness to the design and physical application</li> </ul>
	<ul> <li>how to record and report issues or defects with the materials, components and finishes</li> </ul>
	<ul> <li>why it is important to carry out external and internal pre- installation checks</li> </ul>
	<ul> <li>how to carry out external and internal pre-installation checks, assessing, recording and reporting issues to include:</li> </ul>
	<ul> <li>suitable access</li> <li>property suitability</li> <li>structural integrity</li> <li>dampness</li> </ul>
	<ul> <li>decay</li> <li>vents and ventilation</li> <li>services (gas, electric, water, media cables)</li> </ul>
	<ul> <li>how to recognise, record and report the key issues that may inhibit commencement of the work including but not limited to:         <ul> <li>condition of building fabric</li> <li>identification of any areas of potential water</li> </ul> </li> </ul>

penetration

- visibility and completeness of damp proof course
- condition of window and door seals
- height of internal floors in relation to external floor height
- condition of roof
- damaged and spalled brickwork
- rain and waste water goods
- protection and existence of sub floor ventilation
- wall cavity width and identification of any debris
- why it is important to ensure that all necessary repairs are completed prior to installation
- how to identify when specialist skills and knowledge are required and report accordingly including but not limited to:
  - fire safety
  - electrical
  - asbestos
  - Radon
  - heritage
  - archaeological and architectural features
  - ecology
  - ventilation
  - exposure and topography
- the relevance of an assessment of significance and how to recognise specific requirements for structures of special interest, traditional construction, hard-to-treat buildings and historical significance
- how to identify, record, report and rectify unintended consequences not addressed in the design, including but not limited to the existence of: thermal bridges, thermal bypassing and water ingress, inadequate ventilation and condensation risk
- why it is important to avoid unintended consequences
- how to check, record and report issues with under floor (cross flow) ventilation, flues, chimneys and combustion air ventilators pre and post installation
- why it is important to explain installation procedure to building occupants to include but not limited to the following:
  - scope and work programme
  - safety requirements during the installation process
  - protection of property and personal items
  - specific benefits and implications to include homeowner information
  - agreed standards of making good
- the implications of existing guarantees and warranties that may be compromised by the installation to include but not limited to:
  - timber treatments
  - replacement wall ties
  - injected damp proof course
  - under floor and central heating systems
  - Radon barriers

- electrical wiring
- services
- how to identify and follow the installation quality requirements
- how to work with, around and in close proximity to plant and machinery
- how to direct and guide the operations and movement of plant and machinery to ensure protection of a safe working environment
- why it is important to recognise the potential risk of increased condensation following installation relating to suspended floors and how to prevent it
- how to prepare a floor for insulation, creating access points taking into consideration the following but not limited to:
  - safe systems of work
  - minimising damage
  - checking existing services
  - building construction and heritage significance
  - customer safety
  - archaeology
- how to check for hidden utilities
- the importance of ensuring all work to services (gas, electric, water) is carried out by suitably qualified people
- how to maintain the integrity of membranes
- how to remove and minimise damage to floorcoverings
- why it is important to ensure the minimum void area air space is maintained by removing debris as required
- why it is important to clear and safeguard existing and install additional ventilation if required in accordance with the design and installation checks and report back issues which impact the ventilation assessment
- how to protect the building occupants and their property
- how to install placed, mechanically or adhesively fixed insulation to suspended floors
- the different types of air and vapour control layers and breather membranes, where and how they should be used and why it is important to install them correctly
- the importance of ensuring the integrity of air and vapour control layers and breather membranes following installation and the need to maintain continuity
- why it is important to immediately record and report unforeseen events including but not limited to equipment malfunctions, situations and faults not identified in the original design
- how to ensure pre-installation material checks are within specified parameters and reporting defects
- how to ensure existing cross flow ventilation is maintained within the floor void
- how to maintain existing sound-proofing
- how to install and maintain fire resistant barriers

Title:	Installing insulation to floors in the workplace		
Additional information about this unit			
Assessment Guidance		This unit must be assessed in a work environment, in accordance with the ConstructionSkills' Consolidated Assessment Strategy for Construction and the Built Environment.  Assessors for this unit must have verifiable, current industry experience and a sufficient depth of relevant occupational	
		expertise and knowledge, and must use a combination of assessment methods as defined in the Consolidated Assessment Strategy.	
		Workplace evidence of skills cannot be simulated.

Title:	Spraying insul	Spraying insulation to suspended floors in the workplace		

Unit Number:	J/618/5682		
Learning outcomes  The learner will be able to:			ment criteria rner can:
1 Interpret the given design information relating to the work and resources to confirm its accuracy, completeness and relevance to the building type, fabric and condition when spraying insulation to suspended floors.		1.1	Interpret and extract relevant information from:      drawings     specifications     schedules     method statements     risk assessments     manufacturers' information     data sheets
			Comply with information and/or instructions derived from risk assessments and method statements.
		1.3	Describe why the organisational procedures have been developed and how they are implemented.
			Explain the importance of organisational procedures to solve problems and why it is important to follow them.
		1.5	Describe different types of information, their source, accuracy, completeness and how they are interpreted in relation to:
			drawings
			• specifications
			• schedules
			<ul> <li>method statements</li> </ul>
			risk assessments
			• design
			• standards
			manufacturers' information
			• data sheets
			official guidance
			<ul> <li>current legislation and regulations governing buildings</li> </ul>

Learning outcomes	Assessment criteria	
The learner will be able to:	The learner can:	
2 Know how to comply with environmentally responsible work practices to meet current, legislation standards and official	<ul> <li>2.1 Describe their responsibilities regarding potential accidents, health hazards and the environment in relation to:</li> <li>the workplace</li> </ul>	
guidance when spraying	below ground level	
insulation to suspended floors.	<ul> <li>in confined spaces</li> </ul>	
	at height	
	<ul> <li>tools and equipment</li> </ul>	
	<ul> <li>materials and substances</li> </ul>	
	<ul> <li>movement and storage of materials by manual handling and mechanical lifting</li> </ul>	
	<ul><li>Describe the organisational security procedures for tools, equipment and personal belongings in relation to:</li></ul>	
	• site	
	<ul> <li>workplace</li> </ul>	
	<ul> <li>siting and location of vehicles</li> </ul>	
	<ul><li>company</li></ul>	
	• customer	
	<ul> <li>access equipment</li> </ul>	
	<ul> <li>material and waste storage</li> </ul>	
	<ul> <li>the general public</li> </ul>	
	2.3 Explain the accident reporting procedures and who is responsible for making reports.	
	2.4 Describe the types of fire extinguishers available when spraying insulation to suspended floors and describe how and when they are used in relation to:	
	• water	
	• CO <sub>2</sub>	
	• foam	
	• powder	

Learning outcomes	Assessment criteria
The learner will be able to:	The learner can:
3 Comply with current, relevant legislation, standards and official	3.1 Demonstrate compliance with relevant legislation, standards and official guidance when spraying insulation to suspended floors in relation to the following:
guidance to carry out your work and maintain safe and	methods of work
healthy work practices.	safe use of health and safety control equipment
	safe use of access equipment
	<ul> <li>safe use, storage and handling of materials, tools and equipment</li> </ul>
	operative maintenance of installation equipment
	<ul> <li>specific risks to health including mental health</li> </ul>
	<ul> <li>specific risks associated with ventilation (inside the property and under floor) and also including combustion appliances</li> </ul>
	<ul> <li>specific risks associated with working in confined spaces</li> </ul>
	3.2 Explain why, when and how health and safety control equipment, identified by the principles of prevention, should be used when spraying insulation to suspended floors in relation to:
	collective protective measures
	<ul> <li>personal protective equipment (PPE)</li> </ul>
	<ul> <li>respiratory protective equipment (RPE)</li> </ul>
	local exhaust ventilation (LEV)
	3.3 Describe how emergencies should be responded to in accordance with organisational authorisation and personal skills in relation to:
	• fires
	• spillages
	• injuries
	<ul> <li>emergencies relating to occupational activities</li> </ul>
	<ul> <li>identification of and reporting of asbestos containing materials</li> </ul>
	3.4 Describe how to report risks and hazards identified by the following:
	• risk assessment
	<ul> <li>personal assessment</li> </ul>
	methods of work
	<ul> <li>manufacturers' technical information</li> </ul>
	data sheets
	statutory regulations

Со	ntinued		official guidance
			Control of Substances Hazardous to Health (COSHH)
4 Select the required quantity and quality of resources for the methods of work to	4.1	Select resources associated with own work in relation to materials, components and finishes, tools and equipment.	
	spray insulation to suspended floors.	4.2	Check the suitability, compatibility and characteristics of the materials, components and finishes, determine if they are moisture open or moisture closed and their impact on the building.
		4.3	Record and report issues or defects.
		4.4	Describe why the characteristics, compatibility, quality, uses, sustainability, limitations and defects associated with the resources are important and how defects should be rectified.
		4.5	Describe how the resources should be used and how problems associated with the resources are reported in relation to:
			<ul> <li>protective sheeting</li> </ul>
			<ul> <li>warning signs</li> </ul>
			<ul> <li>temporary barriers</li> </ul>
			<ul> <li>making good materials</li> </ul>
			filling materials
			• sealants
			installation equipment
			all work tools
		4.6	Describe how to confirm that the resources and materials conform to the specification.
		4.7	Explain why the organisational procedures have been developed and how they are used for the selection of required resources.
		4.8	Describe how to identify the hazards associated with the resources and methods of work and how they are overcome.
		4.9	Describe how to calculate the quantity of materials required and used to ensure adequacy of fill as per the system designer specification and wastage associated with the method and procedure to spray insulation to suspended floors.

Learning outcomes		Assessment criteria			
The	The learner will be able to:		The learner can:		
5	Minimise the risk of damage to the work and surrounding area when spraying insulation	5.1	Protect the work and its surrounding area from damage in accordance with safe working practices and organisational procedures.		
	to suspended floors.	5.2	Maintain a safe, clear and tidy work area.		
		5.3	Explain why it is important to maintain a safe, clear and tidy work area.		
		5.4	Dispose of waste in accordance with current legislation.		
		5.5	Describe how to protect work and its surrounding area from damage by general workplace activities, other occupations and adverse weather conditions and how to minimise damage to existing building fabric.		
		5.6	Explain the importance of protecting the work and its surrounding area against the risk of damage.		
		5.7	Explain why and how the disposal of waste must be carried out safely in accordance with the following:		
			current legislation		
			<ul> <li>environmental responsibilities</li> </ul>		
			<ul> <li>organisational procedures</li> </ul>		
			manufacturers' information		
			• data sheets		
			statutory regulations		
			official guidance		
6	Complete the work within the allocated time when spraying insulation to suspended floors.	6.1	Demonstrate completion of your work within the estimated, allocated time and performance requirements of the system design, method statement and the required standard.		
		6.2	Describe the purpose of the work programme, including the estimated and allocated time and explain why deadlines should be kept in relation to:		
			• types of progress charts, timetables and estimated times		
			<ul> <li>organisational procedures for reporting circumstances which will affect the work programme</li> </ul>		

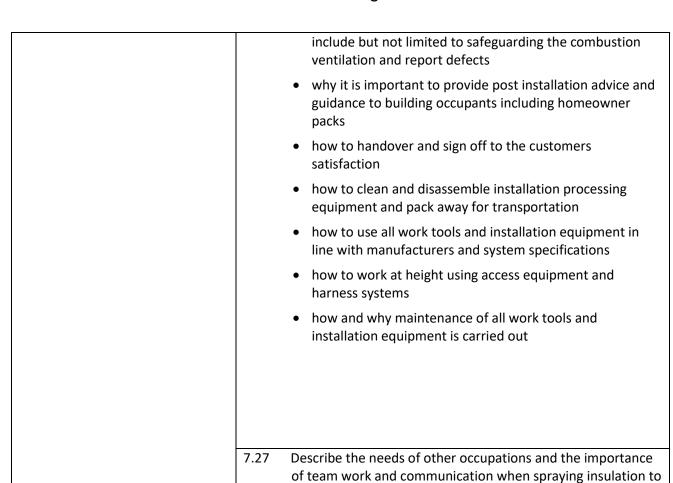

Learning outcomes	Assessment criteria		
The learner will be able to:	The learner can:		
7 Comply with the given contract information to carry	7.1 Demonstrate the following work skills when spraying insulation to suspended floors:		
out the work efficiently to	measuring		
spray insulation to suspended floors to the required	<ul><li>marking out</li></ul>		
specification.	• calculating		
	• cutting		
	• fitting		
	• filling		
	<ul> <li>positioning and securing</li> </ul>		
	making good		
	7.2 Use and maintain all work tools and installation equipment.		
	7.3 Carry out external and internal pre installation checks assessing, recording and reporting issues to include:		
	suitable access		
	property suitability		
	structural integrity		
	• dampness		
	• decay		
	vents and ventilation		
	<ul> <li>services (gas, electric, water, media cables)</li> </ul>		
	7.4 Recognise, record and report the key issues that may inhibit commencement of the work including but not limited to:		
	condition of building fabric		
	identification of any areas of potential water penetration		
	<ul> <li>visibility and completeness of damp proof course</li> </ul>		
	condition of window and door seals		
	<ul> <li>height of internal floors in relation to external floor height</li> </ul>		
	drainage and down pipes		
	protection and existence of sub floor ventilation		
	7.5 Identify the potential risk of increased condensation following installation relating to suspended floors and how to prevent it.		
	7.6 Check, record and report issues with under floor (cross flow) ventilation, flues, chimneys and combustion air ventilators pre and post installation.		
	7.7 Prepare floor for insulation creating access points taking into consideration the following but not limited to:		
	safe systems of work		

	minimising damage
	checking existing services
	building construction and heritage significance
	customer safety
7.8	Check for hidden utilities.
7.9	Maintain integrity of membranes.
7.10	Remove and minimise damage to floorcoverings.
7.11	Ensure the minimum void area air space is maintained by removing debris.
7.12	Clear and safeguard existing and install additional ventilation in accordance with the design and installation checks and report back issues which impact the ventilation assessment.
7.13	Protect the building occupants and their property.
7.14	Confirm pre-installation material checks are within specified parameters to include checking and reporting defects.
7.15	Rectify defects in preparation of insulation measures.
7.16	Assemble, operate, clean and disassemble installation processing equipment.
7.17	Calibrate equipment to measure density, flow and quality tests.
7.18	Spray insulation to suspended floors.
7.19	Maintain existing sound-proofing.
7.20	Install and maintain fire resistant barriers.
7.21	Complete post installation checks in accordance with the design, method statement and installations operations manual and report issues to include but not limited to safeguarding the combustion ventilation and report defects.
7.22	Provide post installation advice and guidance to building occupants including homeowner packs.
7.23	Handover and sign off to the customers satisfaction.
7.24	Clean and disassemble installation processing equipment and pack away for transportation.
7.25	Work at height using access equipment

- 7 Comply with the given contract information to carry out the work efficiently to spray insulation to suspended floors to the required specification.
- 7.26 Describe how the methods of work to meet the specification, are carried out and how problems are identified and reported by the application of knowledge for safe, healthy and environmental work practices, procedures and skills relating to the method and area of work relating to the following:
  - the suitability, compatibility and characteristics of the materials, components and finishes, and determine if they are moisture open or moisture closed, their impact on the building and their appropriateness to the design and physical application
  - how to record and report issues or defects with the materials, components and finishes
  - why it is important to carry out external and internal preinstallation checks
  - how to carry out external and internal pre-installation checks, assessing, recording and reporting issues to include:
    - suitable access
    - property suitability
    - structural integrity
    - dampness
    - decay
    - vents and ventilation
    - services (gas, electric, water, media cables)
  - why it is important to ensure that all necessary repairs are completed prior to installation
  - how to recognise, record and report the key issues that may inhibit commencement of the work including but not limited to:
    - condition of building fabric identification of any areas of potential water penetration
    - visibility and completeness of damp proof course
    - condition of window and door seals
    - height of internal floors in relation to external floor height
    - condition of roof
    - damaged or spalled brickwork
    - rain and waste water goods
    - protection and existence of sub floor ventilation
    - cavity width and identification of any debris
  - how to identify when specialist skills and knowledge are required and report accordingly including but not limited to:
    - fire safety
    - electrical
    - asbestos
    - Radon
    - heritage
    - archaeological and architectural features

- ecology
- ventilation
- exposure & topography
- the relevance of an assessment of significance and how to recognise specific requirements for structures of special interest, traditional construction, hard-to-treat buildings and historical significance
- how to identify, record, report and rectify unintended consequences not addressed in the design, including but not limited to the existence of: thermal bridges, thermal bypassing and water ingress, inadequate ventilation and condensation risk
- why it is important to avoid unintended consequences
- how to check, record and report issues with under floor (cross flow) ventilation, flues, chimneys and combustion air ventilators pre and post installation
- why it is important to explain installation procedure to building occupants to include but not limited to the following:
  - scope and work programme
  - safety requirements during the installation process
  - protection of property and personal items specific benefits and implications to include homeowner information
  - agreed standards of making good
- the implications of existing guarantees and warranties that may be compromised by the installation to include but not limited to:
  - timber treatments
  - replacement wall ties
  - injected damp proof course
  - under floor and central heating systems
  - Radon barriers
  - electrical wiring
  - services
- how to identify and follow the installation quality requirements
- how to work with, around and in close proximity to plant and machinery
- how to direct and guide the operations and movement of plant and machinery to ensure protection of a safe working environment
- why it is important to recognise the potential risk of increased condensation following installation relating to suspended floors and how to prevent it
- how to prepare a floor for insulation, creating access points taking into consideration the following but not limited to:
  - safe systems of work

- minimising damage
- checking existing services
- building construction and heritage significance
- customer safety
- archaeology
- how to check for hidden utilities
- the importance of ensuring all work to services (gas, electric, water) is carried out by suitably qualified people
- how to maintain integrity of membranes
- how to remove and minimise damage to floorcoverings
- why it is important to ensure the minimum void area air space is maintained by removing debris as required
- why it is important to clear and safeguard existing and install additional ventilation if required in accordance with the design and installation checks and report back issues which impact the ventilation assessment
- how to protect the building occupants and their property
- how to assemble, operate, clean and disassemble installation processing equipment
- how to calibrate equipment to measure density, flow and quality tests
- how to spray insulation to suspended floors
- how to ensure pre-installation material checks are within specified parameters to include checking and recording batch number and reporting defects
- the different types of air and vapour control layers and breather membranes, where and how they should be used and why it is important to install them correctly
- the importance of ensuring the integrity of air and vapour control layers and breather membranes following installation and the need to maintain continuity
- why it is important to immediately record and report unforeseen events including but not limited to equipment malfunctions, situations and faults not identified in the original design
- how to ensure existing cross flow ventilation is maintained within the floor void
- how to maintain existing sound-proofing
- how to install and maintain fire resistant barriers
- why it is important to minimise thermal bridging through compliance with design detail ensuring a consistent level of insulation of the area being insulated
- why it is important to complete post installation checks in accordance with the design, method statement and installations operations manual and report issues to

suspended floors.

Additional information about this unit		
Assessment Guidance	This unit must be assessed in a work environment, in accordance with the ConstructionSkills' Consolidated Assessment Strategy for Construction and the Built Environment.	
	Assessors for this unit must have verifiable, current industry experience and a sufficient depth of relevant occupational expertise and knowledge, and must use a combination of assessment methods as defined in the Consolidated Assessment Strategy.	
	Workplace evidence of skills cannot be simulated.	
Sector Subject Areas	5.2 Building and Construction

	the general public		
	2.3 Explain the accident reporting procedures and who is responsible for making reports.		
	2.4 Describe the types of fire extinguishers available when installing to cold roofs and describe how and when they are used in relation to:		
	• water		
	• CO <sub>2</sub>		
	• foam		
	• powder		

Learning outcomes	Assessment criteria
The learner will be able to:	The learner can:
3 Comply with current, relevant legislation, standards and official	3.1 Demonstrate compliance with, relevant legislation, standards and official guidance when installing insulation to cold roofs in relation to the following:
guidance to carry out your work and maintain safe	<ul> <li>methods of work</li> </ul>
and healthy work practices	<ul> <li>safe use of health and safety control equipment</li> </ul>
	<ul> <li>safe use of access equipment and harness systems</li> </ul>
	<ul> <li>safe use, storage and handling of materials, tools and equipment</li> </ul>
	<ul> <li>specific risks to health including mental health</li> </ul>
	<ul> <li>specific risks associated with ventilation (roof space, inside the property and under floor) and combustion appliances</li> </ul>
	3.2 Explain why, when and how health and safety control equipment, identified by the principles of prevention, should be used when installing insulation to cold roofs in relation to:
	<ul> <li>collective protective measures</li> </ul>
	<ul> <li>personal protective equipment (PPE)</li> </ul>
	<ul> <li>respiratory protective equipment (RPE)</li> </ul>
	<ul> <li>local exhaust ventilation (LEV)</li> </ul>
	3.3 Describe how emergencies should be responded to in accordance with organisational authorisation and personal skills in relation to:
	• fires
	• spillages
	• injuries
	<ul> <li>emergencies relating to occupational activities</li> </ul>
	<ul> <li>identification of and reporting of asbestos containing materials</li> </ul>
	3.4 Describe how to report risks and hazards identified by the following:
	<ul> <li>risk assessment</li> </ul>
	personal assessment
	methods of work
	manufacturers' technical information
	data sheets
	<ul><li>statutory regulations</li></ul>
	official guidance
	Control of Substances Hazardous to Health (COSHH)

Learning outcomes	Assessr	ment criteria
The learner will be able to:	The lear	ner can:
4 Select the required quantity and quality of resources for the methods	4.1	Select resources associated with own work in relation to_materials, components, fixings, finishes, tools and equipment.
of work to install insulation to cold roofs.	4.2	Check the suitability, compatibility characteristics of the materials, components, fixing and finishes determine if they are moisture open or moisture closed and their impact on the building.
	4.3	Record and report issues or defects
	4.4	Describe why the characteristics, compatibility, quality, uses, sustainability, limitations and defects associated with the resources are important and how defects should be rectified.
	4.5	Describe how the resources should be used and how problems associated with the resources are reported in relation to:
		<ul> <li>protective sheeting</li> <li>warning signs</li> <li>temporary barriers</li> <li>insulation</li> <li>pipe insulation</li> <li>tank and cylinder jackets</li> <li>insulation fixings</li> <li>access boards</li> <li>loft hatches</li> <li>light wells</li> <li>soffit and fascia boards</li> <li>tile vents</li> <li>ridge tiles</li> <li>sarking felt vents</li> <li>draught-proofing materials</li> <li>fire rated caps</li> <li>cable protection</li> <li>all work tools , equipment</li> </ul>
	4.6	Describe how to confirm that the resources and materials conform to the specification
	4.7	Explain why the organisational procedures have been developed and how they are used for the selection of required resources
	4.8	Describe how to identify the hazards associated with the resources and methods of work and how they are overcome
	4.9	Describe how to calculate the quantity of materials required and used to ensure, adequacy of fill as per system designer specification and wastage associated with the method and procedure to install insulation to cold roofs

Lea	Learning outcomes		sment criteria
The	The learner will be able to:		arner can:
5	Minimise the risk of damage to the work and surrounding area when	5.1	Protect the work and its surrounding area from damage in accordance with safe working practices and organisational procedures
	installing insulation to cold roofs.	5.2	Maintain a safe, clear and tidy work area
	10013.	5.3	Explain why it is important to maintain a safe, clear and tidy work area
		5.4	Dispose of waste in accordance with current legislation.
		5.5	Describe how to protect work and its surrounding area from damage by general workplace activities, other occupations and adverse weather conditions and how to minimise damage to existing building fabric
		5.6	Explain the importance of protecting the work and its surrounding area against the risk of damage
		5.7	Explain why and how the disposal of waste must be carried out safely in accordance with the following:
			current legislation
			<ul> <li>environmental responsibilities</li> </ul>
			<ul> <li>organisational procedures</li> </ul>

Learning outcomes	Assessment criteria
The learner will be able to:	The learner can:
	- timber treatment  - how to work with, around and in close proximity to plant and machinery  - how to direct and guide the operations and movement of plant and machinery to ensure protection of a safe working environment  - how to work in confined spaces  - how to create and protect platforms and walkways  - why it is important to identify and remove infested, damaged and contaminated insulation from the roof area  - how to remove and secure building occupants stored items  - how to identify and install passive ventilation and report any ventilation limitations identified  - why it is important to recognise and report the potential risk of increased condensation following installation relating to roof coverings (pitched and flat) and roof structures (timber, metal, concrete)  - the importance of ensuring all work to services (gas, electric, water, media cables) is carried out by suitably qualified people  - how to check for and protect hidden utilities  - how to identify insulation materials and their characteristics for cold roofs, pipes, storage tanks, cylinders and access hatches  - how to prepare and install, placed, mechanically or adhesively fixed insulation to cold roofs  - why it is important to minimise the effects of thermal bridging through compliance with design detail ensuring consistent insulation of the area being insulated  - how to check serviceability and provision of walkway boards and platforms  - how to prepare and fix pipe, tank and cylinder insulation
	how to ensure the insulation is contained within the prescribed areas
	how to protect downlighters by installation of fire rated caps to the required specification
	<ul> <li>how to ensure insulation around electrical apparatus will not create fire hazards (light fittings, electrical units and cables)</li> </ul>
	<ul> <li>how to insulate and draught-proof access hatches</li> <li>how to Insulate light wells to ensure continuity of</li> </ul>

Learning outcomes	Assessment criteria
The learner will be able to:	The learner can:
7 Continued	insulation
	<ul> <li>how to maintain fire resistant barriers</li> </ul>
	<ul> <li>the different types of air and vapour control layers and breather membranes, where and how they should be used and why it is important to install them correctly</li> </ul>
	<ul> <li>the importance of ensuring the integrity of air and vapour control layers and breather membranes following installation and the need to maintain continuity</li> </ul>
	<ul> <li>why it is important to immediately record and report unforeseen events including but not limited to equipment malfunctions, situations and faults not identified in the original design</li> </ul>
	<ul> <li>why it is important to complete post installation checks in accordance with the design, method statement and installations operations manual and report issues to include but not limited to safeguarding the combustion ventilation and report defects</li> </ul>
	<ul> <li>why it is important to provide advice to building occupants to preserve the integrity of the insulation (insulation data sheet and warning labels)</li> </ul>
	<ul> <li>how to handover and sign off to the customers' satisfaction</li> </ul>
	<ul> <li>how to use all work tools and equipment</li> </ul>
	<ul> <li>how to work at height using access equipment and harness systems</li> </ul>
	how and why maintenance of all work tools and equipment is carried out
	7.17 Describe the needs of other occupations and the importance of team work and communication when installing insulation to cold roofs.

Additional information about this unit		
Assessment Guidance	This unit must be assessed in a work environment, in accordance with the ConstructionSkills' Consolidated Assessment Strategy for Construction and the Built Environment.	
	Assessors for this unit must have verifiable, current industry experience and a sufficient depth of relevant occupational expertise and knowledge and must use a combination of assessment methods as defined in the Consolidated Assessment Strategy.	
	Workplace evidence of skills cannot be simulated.	
	This unit must be assessed against the endorsements detailed within the relevant NVQ Structure. Please refer to the NVQ Structure applicable to the qualification/occupational area in which the candidate is being assessed.	
Sector Subject Areas	5.2 Building and Construction	
Availability for use	Shared unit	
Unit guided learning hours	90	
Assessment	10	

Title:	Frecting and d	lisman	tling access/working platforms in the workplace
			tining decess, working platforms in the workplace
Unit Number:	A/615/1609		
Learning outcom  The learner will be			ssment criteria Parner can:
Interpret the given     information relating to the     work and resources when     erecting and dismantling		1.1	Interpret and extract information from specifications, method statements, risk assessments and manufacturers' information.
_	ng platforms.	1.2	Comply with information and/or instructions derived from risk assessments and method statement.
			State the organisational procedures developed to report and rectify inappropriate information and unsuitable resources and how they are implemented.
		1.4	Describe different types of information, their source and how they are interpreted in relation to:  - specifications, current legislation, method statements, risk assessments and manufacturers' information.
2 Know how to comply with relevant legislation and official guidance when erecting and dismantling access/working platforms.		2.1	Describe their responsibilities under current legislation and official guidance whilst working:  — in the workplace, at height, in confined areas, with tools and equipment, with movement/storage of materials and by manual handling.
		2.2	Describe the organisational security procedures for tools, equipment and personal belongings in relation to site, workplace, company and operative.
		2.3	State what the accident reporting procedures are and who is responsible for making reports.
3 Maintain safe working practices when erecting and dismantling access/working platforms.		3.1	Use personal protective equipment (PPE) and access equipment safely to carry out the activity in accordance with legislation and organisational requirements when erecting and dismantling access/working platforms.
		3.2	Explain why, when and how personal protective equipment (PPE) should be used, relating to erecting and dismantling access/working platforms, and the types, purpose and limitations of each type.
		3.3	State how emergencies should be responded to in accordance with organisational authorisation and personal skills when involved with fires, spillages, injuries and other task-related hazards.

Tit	le:	Erecting and dismantling access/working platforms in the workplace				
	Learning outcomes  The learner will be able to:			Assessment criteria The learner can:		
4 Select the required quantity and quality of resources for the methods of work to erect and dismantle access/working platforms.		4.1	Describe the characteristics, quality, uses, limitations and defects associated with the resources in relation to:  - ladders/crawler boards  - stepladders/platform steps  - trestles  - proprietary staging/podiums  - proprietary towers  - mobile scaffold towers  - protection equipment and notices  - tools and ancillary equipment.			
			4.2	Select resources associated with own work in relation to materials, components, tools and equipment.		
			4.3	State how the resources should be used correctly, how problems associated with the resources are reported and how the organisational procedures are used.		
			4.4	Outline potential hazards associated with the resources and method of work.		
			4.5	Describe how to calculate quantity of equipment required associated with the method/procedure to erect and dismantle access equipment/working platforms.		
5	Minimise the r	_	5.1	Protect the work and its surrounding area from damage.		
	surrounding ar	rea when	5.2	Minimise damage and maintain a clean work space.		
	erecting and dismantling access/working platforms.	5.3	Describe how to protect work from damage and the purpose of protection in relation to general workplace activities, other occupations and adverse weather conditions.			
			5.4	Dispose of waste in accordance with legislation.		
		5.5	State why the disposal of waste should be carried out in relation to the work.			
6	the allocated time when	6.1	Demonstrate completion of the work within the allocated time.			
erecting and dismantling access/working platforms.	6.2	State the purpose of the work programme and explain why deadlines should be kept in relation to:  - organisational procedures for reporting circumstances which will affect the work programme.				

Title: Er	Erecting and dismantling access/working platforms in the workplace			
Learning outcomes The learner will be able to:		Assessment criteria The learner can:		
7 Comply with the given contract information to erect and dismantle access/ working platforms to the		<ul> <li>7.1 Demonstrate the following work skills when erecting and dismantling access/working platforms:         <ul> <li>moving, positioning/erecting, securing, checking, dismantling and removing.</li> </ul> </li> </ul>		
required specification.	ation.	<ul> <li>7.2 Erect, dismantle and store two of the following access equipment to given access regulations: <ul> <li>ladders/crawler boards</li> <li>stepladders/platform steps</li> <li>proprietary towers</li> <li>trestle platforms</li> <li>mobile scaffold towers</li> <li>proprietary staging/podiums.</li> </ul> </li> </ul>		
		<ul> <li>7.3 Describe how to apply safe work practices, follow procedures, report problems and establish the authority needed to rectify them, to: <ul> <li>provide protection to the work area</li> <li>establish a base for equipment</li> <li>erect proprietary access equipment to manufacturer's instructions suitable for the work</li> <li>erect non-proprietary access equipment suitable for the work</li> <li>place protective screens and notices</li> <li>check/monitor equipment during the period of use</li> <li>dismantle and store access equipment</li> <li>use tools and equipment</li> <li>work at height.</li> </ul> </li> </ul>		
		7.4 Safely use and store materials, hand tools and ancillary equipment.		
		7.5 State the needs of other occupations and how to communicate within a team when erecting and dismantling access/working platforms.		
		7.6 Describe how to maintain the tools and equipment used when erecting and dismantling access/working platforms.		

Title:	Erecting and dismantling access/working platforms in the workplace			
Additional information about this unit				
Assessment Guidance	This unit must be assessed in a work environment, in accordance with the ConstructionSkills' Consolidated Assessment Strategy for Construction and the Built Environment.			
	Assessors for this unit must have verifiable, current industry experience and a sufficient depth of relevant occupational expertise and knowledge, and must use a combination of assessment methods as defined in the Consolidated Assessment Strategy.			
	Workplace evidence of skills cannot be simulated.			
	This unit must be assessed against the endorsements detailed within the relevant NVQ Structure.			
	ProQual Level 2 NVQ Diploma in Insulation and Building Treatments (Construction):			
	The following endorsement required (i.e. own area of work)			
	Insulation and building treatments			
	Plus two of the following endorsements required:			
	Ladders/crawler boards Step ladders/platform steps Proprietary towers Trestle platforms Mobile scaffold towers Proprietary staging/podiums

Title:	Develop customer relationships			
<b>Unit Number:</b> T/618/5676				
Learning outcomes The learner will be able to:		Assessment criteria The learner can:		
	at the service	1.1	show that they behave assertively and professionally with customers	
they give will	be excellent	1.2	allocate the time they take to deal with their customer following organisational guidelines	
		1.3	reassure their customer that they are doing everything possible to keep the service promises made by the organisation	
2 Meet the expe		2.1	recognise when there may be a conflict between their customer's expectations and your organisation's service offer	
		2.2	balance their customer's expectations with their organisation's service offer by offering an alternative or explaining the limits of the service offer	
		2.3	work effectively with others to resolve any difficulties in meeting their customer's expectations	
3 Develop the long-term relationship between their customer and their organisation		3.1	give additional help and information to their customer in response to customer questions and comments about their organisation's services or products	
		3.2	discuss expectations with their customer and explain how these compare with their organisation's services or products	
		3.3	advise others of feedback received from their customer	
		3.4	identify new ways of helping customers based on the feedback customers have given them	
		3.5	identify added value that their organisation could offer to long-term customers	
4 Know how to	develop	4.1	describe their organisation's services or products	
customer rela	ntionships	4.2	explain the importance of customer retention	
		4.3	explain how their own behaviour affects the behaviour of the customer	
		4.4	describe how to behave assertively and professionally with customers	

	4.5	describe how to defuse potentially stressful situations
	4.6	identify the limitations of their organisation's service offer
	4.7	compare how customer expectations may change as the customer deals with their organisation
	4.8	identify the cost and resource implications of an extension of the service offer to meet or exceed customer expectations
	4.9	explain the cost implications of bringing in new customers as opposed to retaining existing customers
	4.10	identify who to refer to when considering any variation to their organisation's service offer

Title:	Develop customer relationships
